Features & Benefits

On All Four Channels Simultaneously:
- 20, 16, 12.5, 8, 6 and 4 GHz Bandwidth Models
- Up to 50 GS/s Real-time Sample Rate
- Up to 200 Msamples Record Length with MultiView Zoom™ Feature for Quick Navigation
- Fastest Waveform Capture Rate with >300,000 wfm/s Maximum per Channel

Digital Serial Analyzer Models with Dedicated Configuration for High-speed Serial Design and Compliance Testing

Enhanced Bandwidth to the Probe Tip Extended to Support Multiple Bandwidth Steps for Advanced Signal Integrity

Pinpoint® Triggering with Over 1400 Combinations to Address Virtually Any Triggering Situation

Unique Serial Pattern Triggering Up to 3.125 Gb/s and 8b/10b Standard Protocol Triggering for Isolation of Pattern-dependent Effects and NRZ Serial Test Pattern Triggering up to 6.25 Gb/s

Serial Data Analysis and Compliance for PCI Express, Serial ATA, FB-DIMM, SAS, Fibre Channel, IEEE 1394b, RapidIO, XAU, HDMI, DVI, Ethernet, USB 2.0

Most Popular Jitter and Timing Measurement and Analysis Package

12.1" Largest XGA Touch Screen Display in the Industry

Event Search and Mark to Facilitate the Comprehension of Event Relationships

MyScope® Custom Windows and Right Mouse Click Menus for Exceptional Efficiency

OpenChoice® Software with Microsoft Windows XP OS Enables Built-in Networking and Extended Analysis

Applications

Signal Integrity, Jitter and Timing Analysis

Verification, Debug and Characterization of Sophisticated Designs

Debugging and Compliance Testing of Serial Data Streams for Telecom and Datacom Industry Standards

Investigation of Transient Phenomena

Spectral Analysis

Unmatched Performance for Greater Insight Into Your Design to Get Your Work Done Faster

The DPO70000 and the DSA70000 Series are the new generation of real-time digital phosphor oscilloscopes and are the industry’s best solution to the challenging signal integrity issues faced by designers verifying, characterizing, debugging and testing sophisticated electronic designs. The specialized DSA70000 Series provides a complete and dedicated solution to address the challenges of high-speed serial designs.

The family features exceptional performance in signal acquisition and analysis, operational simplicity and unmatched debugging tools to accelerate your day-to-day tasks. The largest screen in the industry and the intuitive user interface provide easy access to the maximum amount of information.

Unmatched Acquisition Performance

Signal Fidelity of Tektronix Oscilloscopes Ensures Confidence in Your Measurement Results

High bandwidth up to 20 GHz matched across 2, 3 or 4 channels and enabled by Tektronix proprietary DSP enhancement. The user-selectable DSP filter on each channel provides magnitude and phase correction plus bandwidth extension to 20 GHz for more accurate representation of extremely fast signals. The DSP filter on each channel can also be switched off to take advantage of true analog bandwidth for applications needing the highest available raw data capture.

Bandwidth Enhance to the probe tip, extended to support bandwidth steps, gives you an oscilloscope with bandwidth adjustable to capture transitions accurately without excess frequencies and noise.

Digital Phosphor Oscilloscopes and Digital Serial Analyzers

DPO/DSA7000 Series

- Oscilloscopes • www.tektronix.com/oscilloscopes

High sample rate on all models, on all channels, to capture more signal details (transients, imperfections, fast edges)

- 50 GS/s on all four channels for the 12.5, 16 and 20 GHz models
- 25 GS/s on all four channels for the 4, 6 and 8 GHz models

- Lowest jitter noise floor and vertical accuracy for very accurate measurements

- Longest acquisition of the industry to provide more resolution and longer time sequence

  - Standard 10 M samples per channel on the DPO70000 Series and 20 M on the DSA70000 Series
  - Optional up to 100 M samples on all four channels for the 4, 6 and 8 GHz models
  - Optional up to 200 M samples on all four channels for the 12.5, 16 and 20 GHz models

- Easily manage this deep record length, provide detailed comparison and analysis of multiple waveform segments with the MultiView Zoom™ feature. Automatically scroll through deep records visually or create a math expression to instantly highlight differences

- Highest performance P7500 TriMode™ probes.

- Zoom in on four areas of interest simultaneously to compare them.

Accelerate the Debug of Complex Electrical Designs

FastAcq Acquisition Mode Expedites Debugging by Clearly Showing Imperfections

More than just color-grading, FastAcq’s proprietary DPX® acquisition technology captures signals at more than 300,000 waveforms per second on all four channels simultaneously, dramatically increasing the probability of discovering infrequent fault events. And with a simple turn of the intensity knob you can clearly “see a world others don’t see,” displaying the complete picture of your circuit’s operation. Some oscilloscope vendors claim high waveform capture rates for short bursts of time, but only Tektronix oscilloscopes, enabled by DPX technology, can deliver these fast waveform capture rates on a sustained basis – saving minutes, hours or even days by quickly revealing the nature of faults so sophisticated trigger modes can be applied to isolate them.

The Ability to Trigger an Oscilloscope on Events of Interest is Paramount in Complex Signal Debug and Validation

Whether you’re trying to find a system error or need to isolate a section of a complex signal for further analysis, Tektronix’ Pinpoint® triggering provides the solution. The Pinpoint trigger system uses Silicon Germanium (SiGe) technology to provide very high trigger sensitivity with very low trigger jitter and ability to capture very narrow glitches. Pinpoint triggering allows selection of virtually all trigger types on both A and B trigger events. Other trigger systems offer multiple trigger types only on a single event (A event), with delayed trigger (B event) selection limited to edge type triggering and often do not provide a way to reset the trigger sequence if the B event doesn’t occur. But Pinpoint triggering provides the full suite of advanced trigger types on both A and B triggers, logic qualification to control when to look for these events and reset triggering to begin the trigger sequence again after a specified time, state or transition so that even events in the most complex signals can be captured. Other oscilloscopes typically offer less than 20 trigger combinations; Pinpoint triggering offers over 1400 combinations, all at full performance.

With Enhanced Triggering, you can choose to compensate for the difference in time there is between the trigger path and the display path and eliminate virtually any trigger jitter at the trigger point. In this mode, the trigger point can be used as a measurement reference.
Protocol and Serial Pattern Triggering

To debug serial architectures, use the serial pattern triggering for NRZ serial data stream with built-in clock recovery and correlate events across physical and link layer. This feature comes standard on the DSA70000 series and is available on DPO70000 models as Opt. PTH. The instrument can recover the clock signal, identify transitions and allow you to set the desired encoded words for the serial pattern trigger to capture. Opt. PTH and the DSA70000 Series cover serial standards up to 3.125 Gb/s.

Pattern Lock Triggering adds a new dimension to NRZ serial pattern triggering by enabling the oscilloscope to take synchronized acquisitions of a long serial test pattern with outstanding time base accuracy. Pattern lock triggering can be used to remove random jitter from long serial data patterns. Effects of specific bit transitions can be investigated and averaging can be used with mask testing. This feature supports up to 6.25 Gb/s NRZ serial data stream and is standard on the DSA70000 instruments, or included as part of Option PTH on the DPO70000 models.

Large 12.1" XGA Display Screen

The DPO/DSA70000 Series have the largest display in the industry with a 12.1" XGA touch screen that gives up to 15% more waveform display than other oscilloscopes of their classes.

Ten vertical divisions give you 25% more vertical measurement resolution than other oscilloscopes.

Unmatched Usability

The TekConnect™ probe interface provides versatility and ease of use enabled by intelligent bi-directional oscilloscope-to-probe communication and maintain signal fidelity.

The DPO/DSA70000 Series instruments contain a comprehensive suite of features, such as a touch screen, shallow menu structures, intuitive graphical icons, knob-channel vertical controls, support for right mouse clicks, mouse wheel operation and intuitive Export/Save/Recall menus.

Interoperability with Logic Analyzers for Digital Design and Debug

Tektronix‘ Integrated View (iView”) data display enables digital designers to solve signal integrity challenges and effectively debug and verify their systems more quickly and easily. This integration allows designers to view time-correlated digital and analog data in the same display window, and isolate the analog characteristics of the digital signals that are causing systems failures. No user calibration is required. And once set up, the iView feature is completely automated.

Unmatched Versatility

Get the Most of Your Oscilloscope by Fully Controlling its Waveform Acquisition and Display Parameters

You have the choice of three horizontal time base modes of operations. If you are simply doing signal exploration and want to interact with a lively signal, you will use the Automatic or interactive default mode that provides you with the liveliest display update rate. If you want a precise measurement and the highest real-time sample rate that will give you the most measurement accuracy, then the Constant Sample Rate mode is for you. It will maintain the highest sample rate and provide the best real-time resolution. The last mode is called the Manual mode because it ensures direct and independent control of the sample rate and record length.

With the MyScope® Feature, Create Your Own Control Windows with Only the Controls, Features and Capabilities that You Care About

Easily create your own personalized “toolbox” of oscilloscope features in a matter of minutes using a simple, visual, drag-and-drop process. Once created, these custom control windows are easily accessed through a dedicated MyScope button and menu selection on the oscilloscope button/menu bar, just like any other control window. You can make an unlimited number of custom control windows, enabling each person who uses the oscilloscope in a shared environment to have their own unique control window. MyScope control windows will benefit all oscilloscope users, eliminating the ramp-up time that many face when returning to the lab after not using an oscilloscope for a while, and enables the power user to be far more efficient. Everything you need is found in one control window rather than having to constantly navigate through menu after menu to repeat similar tasks.
Digital Phosphor Oscilloscopes and Digital Serial Analyzers

DPO/DSA70000 Series

With OpenChoice® Software, Customize Your Test and Measurement System with Familiar Analysis Tools

The analysis and networking features of OpenChoice software add more flexibility to Tektronix' Windows XP oscilloscopes: Using the fast embedded bus, waveform data can be moved directly from acquisition to analysis applications on the Windows desktop at much faster speeds than conventional GPIB transfers. Tektronix' implementation of industry standard protocols, such as TekVISA™ interface and ActiveX controls, are included for using and enhancing Windows applications for data analysis and documentation. IVI instrument drivers are included to enable easy communication with the oscilloscope using GPIB, serial data and LAN connections from programs running on the instrument or an external PC. Or, use the Software Developer's Kit (SDK) to help create custom software to automate multi-step processes in waveform collection and analysis with Visual BASIC, C, C++., MATLAB, LabVIEW, LabWindows/CVI and other common Application Development Environments (ADE). Integration of the oscilloscope with external PCs and non-Windows hosts is also supported. In addition, the OpenChoice architecture provides a comprehensive software infrastructure for faster, more versatile operations. Data transfer programs, such as the Excel or Word toolbar are used to simplify analysis and documentation on the Windows desktop or on an external PC.

More Insight into Your Complex Electrical Design for Characterization and Compliance Testing

Such as a simple math expression, waveform mask testing, a pass/fail compliance test, event searching, event marking or a custom application that you develop yourself, the DPO/DSA70000 Series offers the industry's most comprehensive set of analysis and compliance tools.

A Wide Range of Built-in Advanced Waveform Analysis Tools

Waveform cursors make it easy to measure trace-to-trace timing characteristics, while cursors that link between YT and XY display modes make it easy to investigate phase relationships and Safe Operating Area violations. Select from 53 automatic measurements using a graphical palette that logically organizes measurements into Amplitude, Time, Combination, Histogram and Communications categories. Gather further insight into your measurement results with statistical data such as mean, min, max, standard deviation and population.

Define and apply math expressions to waveform data for on-screen results in terms that you can use. Access common waveform math functions with the touch of a button. Or, for advanced applications, create algebraic expressions consisting of live waveforms, reference waveforms, math functions, measurement values, scalars and user-adjustable variables with an easy-to-use calculator-style editor.

FFT – To analyze your signal in the spectral domain, use the basic spectral (provides you with the best parameter), or use advanced spectral with the manual time base horizontal mode (to directly control the frequency span, center frequency and resolution bandwidth).

Filtering – Enhance your ability to isolate or remove some important component of your signal (noise or specific harmonics of the signal) by creating your own filters or using the filters provided as standard with the instrument. These customizable FIR filters can be used to implement today's preferred signal-filtering techniques, including Decision Feedback Equalization (DFE) or to minimize the effects of fixtures and cables connected to the device under test.

A Breadth of Tools to Extend Waveform Analysis Even Further

Jitter and Timing Measurement and Analysis – Tight timing margins demand stable, low jitter designs. This feature extends the oscilloscope capability by making jitter measurements over contiguous clock cycles from every valid pulse in a single-shot acquisition. Multiple measurements and trend plots quickly show system timing under variable conditions. It also provides Rji/Dji on signals without a repeating pattern and without requiring the pattern length. You can get insight into the signal and noise characteristics like SSC modulation range and profile.
Digital Phosphor Oscilloscopes and Digital Serial Analyzers
DPO/DSA70000 Series

This analysis tool is standard on the DSA70000 Series and comes as Opt. JA3 or Opt. JE3 on the DPO70000 Series. JE3 provides a subset of the measurements.

Advanced Event Search and Mark (Opt. ASM) – Event Search and Mark will relieve the user from the tedious task of examining data by highlighting important events, skipping the unimportant ones, and enhancing the comprehension of event relationships. You can navigate between the events of interest effortlessly. A basic event (edge-only) search and mark is provided as a standard feature; and support for more advanced event types like transition, setup and hold or logic pattern, is provided with the ASM option on the DPO70000 Series, standard on the DSA70000.

Waveform Limit Testing (Opt. LT) – This feature consists of comparing an acquired waveform to boundaries. These boundaries are typically defined by the user to specify a tolerance band around a reference waveform. If any part of the acquired waveform falls outside the limit, the software returns a failure message and the location of the failure on the waveform.

Communications Mask Testing – This feature provides a complete portfolio of masks for verifying compliance to serial communications standards. It supports 156 Standards Masks.

Serial Data Compliance and Analysis – Patented Real-time Eye (RT-Eye® clock recovery and eye-rendering) provides high-speed serial data domain expertise to enable analysis and compliance measurements for testing high-speed serial standards like PCI Express, Serial ATA, SAS, InfiniBand and FB-DIMM, as well as Front Side Bus (FSB), XAUI, Fibre Channel, IEEE 1394b and RapidIO. It recovers the clock of the serial stream to ≥10 Gb/s and generates very high precision eye diagrams with an accumulated waveform database. Serial data compliance and analysis comes standard on the DSA70000 Series and optional on the DPO70000 Series (Opt. RTE). The compliance modules for PCI Express, Serial ATA, SAS, InfiniBand and FB-DIMM are options on both DSA70000 Series and DPO70000 Series (Opt. PCE, SST, IBA or FBD).

Optional HDMI Compliance Testing (Opt. HT3) – Compliance testing: This is your complete solution for HDMI compliance testing, enabling unprecedented efficiency by offering a complete solution of unmatched reliable automation to support the widest range of tests in the industry.

Accelerating the research of specific events in an acquired waveform.

Test eye diagram in equivalent time against the standard mask.

RT-Eye® version 2.0 – PCI Express Rev1.1 Compliance test.

HDMI compliance testing.
Digital Phosphor Oscilloscopes and Digital Serial Analyzers

DPO/DSA70000 Series

Optional Ultra Wideband WiMedia Analysis (Opt. UWB) – Excellent amplitude and phase flatness as well as low phase noise make the DPO/DSA70000 the ideal tool for engineers designing WiMedia Ultra Wideband radios into Certified Wireless USB, WiNet and UWB Bluetooth devices. UWB WiMedia analyzes all data rates, Time Frequency Codes and Band Groups on the DPO/DSA71604 or DPO/DSA72004. Included in the easy-to-setup-and-use package are frequency domain and modulation domain analysis from the Tektronix Real-Time Spectrum Analyzers including Constellation patterns, Error Vector Magnitude, Spectrograms, Power Spectral Density and Adjacent Channel Power Ratio from single shot Ultra Wideband RF.

Optional Power Measurement and Analysis (Opt. PWR) – Analyze power dissipation in power supply switching devices and magnetic components, and generate detailed reports in customizable formats. The HiRes acquisition mode delivers greater than eight bits of vertical resolution on single-shot or repetitive signals at bandwidth up to 125 MHz. The powerful and flexible measurements, math, and math-on-math capabilities make it an ideal solution for performing power measurements, such as voltage, current, instantaneous power and energy, for power device designers.

Optional Ethernet Compliance Testing (Opt. ET3) – Provides compliance testing for 10/100/1000Base-T signals.

Optional DVI Compliance Testing (Opt. DVI) – Provides Digital Visual Interface physical layer validation and compliance testing with automated eye diagram generation and parametric testing.

Optional USB Compliance Testing (Opt. USB) – Provides compliance testing for USB2.0 signals.

DSA70000 Series

For Developing with Today’s High-speed Serial Standards, the DSA70000 Digital Serial Analyzer Is Your Uncompromised High-Performance, Dedicated Solution to Efficiently Address Your Design Challenges

The DSA70000 Series is a new generation of real-time digital serial analyzers based on the same advanced technology as the DPO70000 real-time digital phosphor oscilloscopes. As high-speed serial technology becomes more pervasive, more designers are looking for easy to use, complete, and dedicated solutions for verifying, characterizing, debugging and testing sophisticated high-speed serial designs. The DSA70000 Series is specifically targeted to address the challenging high-speed serial design issues faced by designers, by encapsulating extended high-speed serial data domain expertise. It inherits exceptional signal acquisition performance, operational simplicity, and unmatched debugging tools from the DPO70000 Series, to accelerate your day-to-day tasks. It also features the extended analysis tools that enable high-speed serial signal analysis and compliance measurements in a specialized instrument.

The DSA70000 Series Analyzers provide the signal fidelity of Tektronix oscilloscopes to ensure confidence in your measurement results: high sample rate on all models, on all channels, to capture more signal details (transients, imperfections, fast edges), 25 GS/s on all four channels for the 4, 6 and 8 GHz models, 50 GS/s on all four channels for the 12.5, 16 and 20 GHz models, bandwidth enhancement as well as the best low-jitter noise floor and vertical accuracy for very accurate measurements.

The DSA70000 Series provides the longest acquisition of the industry to provide more resolution and longer time sequence – a standard 20 M on the DSA Series, or an optional up to 100 M samples on all four channels for the 4, 6
Digital Phosphor Oscilloscopes and Digital Serial Analyzers
DPO/DSA70000 Series

and 8 GHz models, 200 M samples on all four channels for the 12.5, 16 and 20 GHz models. Easily manage this deep record length and provide detailed comparison and analysis of multiple waveform segments with the MultiView™ feature.

The DSA70000 analyzers share the DPX technology of the DPO70000 and can deliver high waveform capture rate at more than 300,000 waveforms per second. The DSA70000 Series capture these intermittent fault events that can break a design with the FastAcq acquisition mode. With Pinpoint® triggering, the DSA70000 series is also equipped to isolate a section of a complex signal for further analysis.

To debug serial architectures, the DSA70000 Series features the highest accuracy jitter and timing measurements as well as comprehensive analysis algorithms. Tight timing margins demand stable, low-jitter designs. You can make jitter measurements over contiguous clock cycles from every valid pulse in a single-shot acquisition. Multiple measurements and trend plots quickly show system timing under variable conditions. It also includes Random Jitter and Deterministic Jitter separation as well as Total Jitter measurement at Bit Error Ratio to $10^{-18}$.

Communications Mask Testing provides a complete portfolio of masks for verifying compliance to serial communications standards. It supports 156 Standards Masks – ITU-T (1.544 Mb/s to 155 Mb/s)/ANSI J11.102 (1.544 Mb/s to 155 Mb/s); Ethernet IEEE 802.3; ANSI X3.263 (1.544 Mb/s to 3.125 Gb/s XAUI); Sonet/SDH (51.84 Mb/s to 2.4883 Gb/s); Fibre Channel (133 Mb/s to 4.25 Gb/s); InfiniBand (2.5 Gb/s); USB (12 Mb/s to 480 Mb/s); Serial ATA (1.5 Gb/s, 3 Gb/s); Serial Attached SCSI (1.5 Gb/s, 3.0 Gb/s); IEEE 1394b (491.5 Mb/s to 1.966 Gb/s); Rapid I/O (1.25 Gb/s to 3.125 Gb/s); OIF Standards (2.488 Gb/s to 3.11 Gb/s); PCI Express (2.5 Gb/s).

Accurate, Simple and Customizable Physical Layer Testing on High-speed Serial Standards. When designing to industry standards, analog validation and compliance testing (Front Side Bus, PCI Express, FB-DIMM, Serial ATA, Serial Attached SCSI, Fibre Channel, XAUI, IEEE1394b, RapidIO) is critical to ensure device interoperability. Patented Real-Time (RT-Eye®) clock recovery and Eye Rendering provides standard-specific clock recovery, high-precision eye diagrams for transition and non-transition bits and accurate jitter measurements, and de-emphasis measurements. Standard-specific compliance and analysis modules that configure the pass/fail waveform mask and measurement limit testing are also available as an option for PCI Express (Option PCE), for Serial ATA and SAS (Option SST), for FB-DIMM (Fully Buffered – Dual Inline Memory Module) (Option FBDD) or InfiniBand (Option IBA).

*1 A 4.25 Gb/s mask supported using glitch trigger. It is standard on the DSA70000 Series and optional as Opt. MTH on DPO70404, DPO70604 and DPO70804.

➤ DPO/DSA70000 Series

Trigger Modes

- **Edge** – Positive or negative slope on any channel or front panel auxiliary input. Coupling includes DC, AC, noise reject, HF reject and LF reject.
- **Glitch** – Trigger on or reject glitches of positive, negative or either polarity. Minimum glitch width is down to 150 ps (typical) with re-arm time of 300 ps.
- **Width** – Trigger on width of positive or negative pulse either within or out of selectable time limits (down to 150 ps).
- **Runt** – Trigger on a pulse that crosses one threshold but fails to cross a second threshold before crossing the first again. Event can be time- or logic-qualified.
- **Transition** – Trigger on pulse edge rates that are faster or slower than specified. Slope may be positive, negative or either.
- **Setup/Hold** – Trigger on violations of both setup and hold time between clock and data present on any two input channels.
- **Pattern** – Trigger when pattern goes false or stays true for specified period of time. Pattern (AND, OR, NAND, NOR) specified for four input channels defined as high, low, or don’t care.
- **State** – Any logical pattern of channels (1, 2, 3) clocked by edge on channel 4. Trigger on rising or falling clock edge.
- **Window** – Trigger on an event that enters or exits a window defined by two user-adjustable thresholds. Event can be time- or logic-qualified.
- **Trigger Delay by Time** – 3.2 ns to 3 Ms.
- **Trigger Delay by Events** – 1 to 2 G events.
- **Comm** – Standard feature on the DSA70000, provided as part of Opt. MTH on the DPO70000 Series. Support for AMI, HDB3, BnZS, CMI, MLT3 and NRZ encoded signals.
- **Serial Pattern** – Trigger on NRZ-encoded data up to 3.125 Gbaud; above 1.25 Gbaud requires 8b/10b encoded data. Extended with pattern lock triggering to capture repeated acquisitions of long serial test patterns up to 6.25 Gb/s.

### DC Gain Accuracy

±2% (of reading)

### Bandwidth Limits

Depending on instrument model: 19 GHz, 18 GHz, 17 GHz, 16 GHz, 15 GHz, 14 GHz, 13 GHz, 11 GHz, 10 GHz, 9 GHz, 8 GHz, 7 GHz, 6 GHz, 5 GHz, 4 GHz, 3 GHz, 2 GHz, 1 GHz or 500 MHz

### Input Coupling

DC (50 Ω), GND

### Input Impedance

50 Ω ±1.5%, 1 MΩ with TCA-1MEG adapter

### Input Sensitivity

18 GHz and Below: 20 to 99.5 mV/div and 200 mV/div to 1 V/div

20 GHz and 19 GHz: 10 mV/div to 1 V/div (100 mV to 10 V full scale)

### Vertical Resolution

8 bit (11 bit with averaging)

### Max Input Voltage, 50 Ω

< 5.5 Vpp for ≥ 1 V full scale; also determined by TekConnect accessory

### Offset Range

10 mV/div: ±450 mV

20 mV/div: ±400 mV

50 mV/div: ±250 mV

100 mV/div: ±4.5 V

200 mV/div: ±4.0 V

500 mV/div: ±2.5 V

1.0 V/div: 0

### Offset Accuracy

10 mV/div - 99.5 mV/div: ± (0.35% (offset value-position) + 1.5 mV + 1% of full scale)

100 mV/div - 1 V/div: ± (0.35% (offset value-position) + 15 mV + 1% of full scale)

### Delay Between Any Two Channels (typical)

≤100 ps for any two channels with equal V/div and coupling settings

≤50 ps with BW enhance enabled (BW+)

### Channel-to-Channel Isolation (any two channels at equal vertical scale settings)

≥120:1 (for input frequency 0 to 10 GHz)

≥80:1 (for input frequency >10 GHz to 12 GHz)

≥50:1 (for input frequency >12 GHz to 15 GHz)

≥25:1 (for input frequency >15 GHz)
Digital Phosphor Oscilloscopes and Digital Serial Analyzers

Search and Mark Events

Basic – Mark any events and document waveforms. Search positive, negative slopes or both on any channels. Event table summarizes all found events. All events are time stamped in reference to trigger position. Users can choose to stop acquisitions when an event is found.

Advanced – Search glitches or runts, as well as transition rate, pulse width, positive Duty Cycle, positive Duty Cycle, Period, Frequency, Delay.

Waveform Measurements

Amplitude Related – Amplitude, High, Low, Maximum, Minimum, Peak to Peak, Mean, Cycle Mean, RMS, Cycle RMS, Positive Overshoot, Negative Overshoot.

Combination – Area, Cycle Area, Phase, Burst Width, Histogram Related Waveform Count, Hits in Box, Peak Hits, Median, Maximum, Minimum, Peak to Mean, Mean (µ), Standard Deviation (σ), µ±1σ, µ±2σ, µ±3σ.

Eye Pattern Related – Extinction Ratio (absolute, %, dB), Eye Height, Eye Width, Eye Top, Eye Base, Crossing %, Jitter (p-p, RMS, 6σ), Noise (µ-p-p, RMS), Signal/Noise Ratio, Cycle Distortion, Q-Factor.

Waveform Processing/Math

Arithmetic – Add, Subtract, Multiply, Divide Waveforms and Scalars.

Algebraic Expressions – Define extensive algebraic expressions including Waveforms, Scalars, User-adjustable Variables and Results of Parametric Measurements e.g., (Integral (CH.1-Mean(CH.1)) x 1.414xVAR1).

Math Functions – Average, Invert, Integrate, Differentiate, Square Root, Exponential, Log, Abs, Ceiling, Floor, Min, Max, Sin, Cos, Tan, ASin, ACos, ATan, Sinh, Cosh, Tanh

Relational – Boolean result of comparison >, <, ≥, ≤, =, ≠.

**Acquisition Modes**

**FastAcq Acquisition Mode**

FastAcq optimizes the instrument for analysis of dynamic signals and capture of infrequent events.

**Maximum FastAcq Waveform Capture Rate**

>300,000 wfms/s on all four channels simultaneously.

**Waveform Database**

Accumulate waveform database providing three-dimensional array of amplitude, time, and counts.

**Sample**

Acquire sampled values.

**Peak Detect**

Captures narrow glitches at all real-time sampling rates:
- 1 ms at ±125 MS/s; 1/sample rate at ≥250 MS/s

**Averaging**

From 2 to 10,000 waveforms included in average.

**Envelope**

From 1 to 2 x 10^9 waveforms included in min-max envelope.

**Hi-Res**

Real-time boxcar averaging reduces random noise and increases resolution.

**FastFrame™ Acquisition**

Acquisition memory divided into segments; maximum trigger rate >310,000 waveforms per second.

**Roll Mode**

Up to 10 MS/s with a maximum record length of 40 M

**Computer System and Peripherals**

**Operating System** — Windows XP

**CPU** — Intel Pentium 4, 3.4 GHz processor.

**Hard Disk Drive** — 2 GB.

**CD Drive** — Front-panel CD-R/W drive with 80 GB capacity.

**RAM Memory** — 2 GB.

**Peripheral Devices** — USB ports, optical mouse, keyboard, microphone input, stereo line output.

**Input/Output Ports**

**Front Panel**

- **Aux Trigger Input** — See trigger specifications.

- **Recovered Clock** — SMA connector, ±1.25 Gbps; output swing ≥100 mVp-p into a 100 Ω load. Requires Opt. PTH or Opt. MTH to enable on DPO70000, standard on DSA70000.

- **DC Probe Calibration Output** — BNC connector; output swing of 100 mVp-p into a 100 Ω load. Requires Opt. PTH or Opt. MTH to enable on DPO70000, standard on DSA70000.

**Fast Edge Output** — SMA connector provides fast edge signal: 1 kHz ±20%; 810 mV (base to top) ±20% into a 10 kΩ load; 440 mV ±20% into a 50 Ω load.

**AUX Trigger Output** — BNC connector; provides a TTL-compatible, polarity switchable pulse when the oscilloscope triggers.

**USB2.0 Port** — One in front, four on back. Allows connection or disconnection of USB keyboard, mouse or storage device while oscilloscope is on.

**Rear Panel**

**External Time Base Reference In** — BNC connector; allows external time base to phase lock to external 10/100 MHz reference. Optimized via a software switch for either a highly stable clock or tracking mode.

**Time Base Reference Out** — BNC connector; provides TTL-compatible output of internal 10 MHz reference oscillator.

**AUX Trigger Output** — BNC connector, 0 to 3 V; default output is A-Event Trigger low true.

**Parallel Port** — IEEE 1284, DB-25 connector.

**Audio Ports** — MINI phone jacks for stereo microphone input and stereo line output.

**USB2.0 Ports** — One in back. Allows connection or disconnection of USB keyboard, mouse or storage device.

**Mouse Port** — PS/2 compatible.

**Keyboard Port** — PS/2 compatible.
### Pinpoint® Trigger System

</tr>
</tbody>
</table>

#### Sensitivity
- Internal DC Coupled: 4% of full scale from DC to 50 MHz
  - 10% of full scale at 4 GHz
  - 20% of full scale at 8 GHz
  - 50% of full scale at 11 GHz
- External (Auxiliary Input): 50 &ohm; at 250 mV from DC to 50 MHz, increasing to 350 mV at 1.0 GHz

#### Trigger Characteristics
- A Event and Delayed B Event Trigger Types: Edge, Glitch, Runt, Width, Transition Time, Timeout, Pattern, State, Setup/Hold, Window—all except Edge, Pattern, and State can be Logic State qualified by up to two channels
- Main Trigger Modes: Auto, Normal, and Single
- Enhanced Triggering: User-selectable; it corrects the difference in timing between the trigger path and the acquired data path (it supports all Pinpoint trigger types on both A- and B-Events except pattern trigger and not available in FastAcq)
- Trigger Sequences: Main, Delayed by Time, Delayed by Events, Reset by Time, Reset by State, Reset by Transition, All sequences can include separate horizontal delay after the trigger event to position the acquisition window in time
- Communications-related Triggers: Requires Opt. MTH Standard
- Support for AMI, HDB3, BnZS, CMI, MLT3 and NRZ encoded communications signals. Select among isolated positive or negative one, zero pulse form or eye patterns as applicable to the standard
- Serial Pattern Trigger: Requires Opt. PTH Standard
- Up to 64 bit serial word recognizer, bits specified in binary (high, low, don’t care) or hex format. Trigger on NRZ-encoded data up to 1.25 GBaud
- Clock Recovery System: Requires Opt. PTH or Opt. MTH Standard
- Clock Recovery Phase Locked Loop Bandwidth: Fixed at FBaud/1600
- Frequency Range: 1.5 MBaud to 3.125 GBaud
- Clock Recovery Jitter (RMS): <0.25% bit period + 2 ps RMS for PRBS data patterns
  <0.25% bit period + 1.5 ps RMS for repeating “0011” data pattern
- Tracking/Acquisition Range: ±2% of requested baud
- Minimum Signal Amplitude needed for Clock Recovery: 1 divp-p up to 1.25 GBaud
  1.5 divp-p above 1.25 GBaud
- Trigger Level Range Internal: ±120% of full scale from center of screen
- AUX Trigger: TekConnect interface: ±5 V
- Trigger Coupling: DC, AC (attenuates <100 Hz), HF Rej (attenuates >20 kHz), LF Rej (attenuates >200 kHz), Noise Reject (reduces sensitivity)
- Trigger Holdoff Range: 250 ns min to 12 s max

#### LAN Port
- RJ-45 connector, supports 10Base-T, 100Base-T and 1000Base-T

#### Serial Port
- DB-9 COM1 port

#### Windows Video Port
- 15 pin D-sub connector on the rear panel, video is IBM XGA compatible. Connects to show the oscilloscope display, including live waveforms on an external monitor or projector. The primary Windows desktop can also be displayed on an external monitor using this port.

#### GPIB Port
- IEEE 488.2 standard

#### TekScope XGA Video Port
- 15 pin D-sub connector on the rear panel, video is IBM XGA compatible

#### TekLink™
- Proprietary interface for connecting multiple Tektronix instruments
- Power: 100 to 240 VAC, ±10%, 50/60 Hz; 115 VAC, ±10%, <970 Watts, 400 Hz; CAT I, <110 VA typical.

### Environmental

#### Temperature

- **Operating**: 5 ºC to +45 ºC
- **Non-Operating**: –20 ºC to +60 ºC

#### Humidity

- **Operating**: 8% to 80% relative humidity (RH) at up to 32 ºC. 5% to 45% RH above +32 ºC up to +45 ºC.
- **Non-Operating**: 5% to 95% relative humidity (RH). Upper limit derated to 45% RH above +30 ºC up to +60 ºC.

#### Altitude

- **Operating**: 10,000 ft. (3,048 m).
- **Non-Operating**: 40,000 ft. (12,190 m).

### Regulatory

- **Certifications**: UL 3111-1, CSA 1010.1, EN61010-1, EC 81010-1.

### Ordering Information

- **DPO70404**: 4 GHz Digital Phosphor Oscilloscope.
- **DPO70604**: 6 GHz Digital Phosphor Oscilloscope.
- **DPO70804**: 8 GHz Digital Phosphor Oscilloscope.
- **DPO71254**: 12.5 GHz Digital Phosphor Oscilloscope.
- **DPO71604**: 16 GHz Digital Phosphor Oscilloscope.
- **DPO72004**: 20 GHz Digital Phosphor Oscilloscope.
- **DSA70404**: 4 GHz Digital Serial Analyzer.
- **DSA70604**: 6 GHz Digital Serial Analyzer.
- **DSA70804**: 8 GHz Digital Serial Analyzer.
- **DSA71254**: 12.5 GHz Digital Serial Analyzer.
- **DSA71604**: 16 GHz Digital Serial Analyzer.
- **DSA72004**: 20 GHz Digital Serial Analyzer.

**All Models Include**: Accessory pouch, front cover, mouse, keyboard, quick start user manual, probe calibration and deskew fixture, DPO70000 Series product software CD/DVD-ROM, DPO70000 Series operating system restoration CD/DVD-ROM. Optional applications software CD/DVD-ROM, performance verification procedure PDF file, GPR programmer’s reference (on product software CD/DVD-ROM), calibration certificate documenting NIST traceability, Z 540-1 compliance and ISO9001, power cord, one year warranty. User to specify quick start user manual language and power plug when ordering.

### Options

#### Instrument Options

- **Record Length Options for DPO70000 Series**
  - Opt. 2XL – 20 MSamples/ch.
  - Opt. 5XL – 50 MSamples/ch.
  - Opt. 10XL – 100 MSamples/ch.

- **Record Length Options for DSA70000 Series**
  - Opt. 5XL – 50 MSamples/ch.
  - Opt. 10XL – 100 MSamples/ch.

#### Software Options for DPO70000 Series

- **Opt. PTH**: Protocol Triggering and Decoding for 8b/10b-encoded Serial Signals up to 3.125 Gb/s. Includes hardware clock recovery and pattern lock triggering.
- **Opt. RTE**: RT-Eye® Serial Data Compliance and Analysis Software.
- **Opt. JA3**: Advanced Jitter Analysis Software.
- **Opt. MTH**: Mask testing for Serial Standards up to 4.25 Gb/s. Includes hardware clock recovery.
- **Opt. ASM**: Advanced Event Search and Mark.

#### Software Options for DPO70000 Series and DSA70000 Series

- **Opt. ASM**: Advanced Event Search and Mark.
- **Opt. ET3*2**: Ethernet Compliance Test Software.
- **Opt. USB*3**: USB2.0 Compliance Test Software only.
- **Opt. PWR*4**: Power Measurement and Analysis Software.
- **Opt. HT3**: HDMI Compliance Test Software.
- **Opt. DVI**: DVI Compliance Test Solution.
- **Opt. PCE*5**: PCI Express Module for RT-Eye Serial Data Compliance and Analysis Software.
- **Opt. SST*5**: SATA and SAS Analysis Software Module for RT-Eye Serial Data Compliance and Analysis Software.
- **Opt. FBD*5**: FB-DIMM Compliance Module for RT-Eye Serial Data Compliance and Analysis Software.
- **Opt. IBA*5**: InfiniBand Compliance Module for RT-Eye Serial Data Compliance and Analysis Software.
- **Opt. UWB**: Ultra Wide Band WiMedia Analysis.

*9 Requires Ethernet Test Fixture.
*2 Requires TDSUSB* (USB Test Fixture).
*3 Requires TDSUSB* (USB Test Fixture).
*4 At least Opt. 2XL and a TCA-1MEG TekConnect 1 MΩ buffer amplifier are recommended for use.
*5 Requires Opt. RTE on DPO70000 Series.
*9 For models of bandwidth ≥ 12.5 GHz only.
Digital Phosphor Oscilloscopes and Digital Serial Analyzers

User Manual Options

Power Plug Options
Opt. A2 – UK.

Service Options
Opt. C1 – Provides a single calibration event or coverage for the designated calibration interval, whichever comes first.
Opt. C5 – Calibration Service 5 years.

Recommended Accessories Probes
P7516 – 16 GHz TriMode™ probe.
P7513 – 13 GHz TriMode probe.
P7513A – 13 GHz Z-Active™ differential probe.
P7312SMA – 13 GHz TekConnect® differential SMA probe.
P7380A – 8 GHz Z-Active differential probe.
P7380SMA – 8 GHz TekConnect differential SMA probe.
P7360A – 6 GHz Z-Active differential probe.
P7340A – 4 GHz Z-Active differential probe.
TCPA300/TCPA400 – Series current measurement systems.
P5200/P5205/P5210 – High voltage differential probes.

Adapters
TCA-292MM – TekConnect to 2.92 mm connectors.
TCA-SMA – TekConnect-to-SMA adapter.
TCA-N – TekConnect-to-N adapter.
TCA-BNC – TekConnect-to-BNC adapter.
TCA75 – 4 GHz precision TekConnect 75 Ω to 50 Ω adapter with 75 Ω BNC input connector.
TCA-1MEG – TekConnect high-impedance buffer amplifier. Includes P6139A passive probe.

Cables
GBF Cable (1 m) – Order 012-0991-01.
GBF Cable (2 m) – Order 012-0991-00.
RS-232 Cable – Order 012-1298-00.
Centronics Cable – Order 012-1214-00.

Accessories
Transit Case – Order 016-1985-00.
Rackmount Kit – Order 016-1977-00.
Oscilloscope Cart – Order K4000.
TDSUSBF – Test fixture for use with Opt. USB.
Probe Calibration and Deskew Fixure (4 GHz) – Order 067-0484-xx.
Probe Deskew Fixture (>4 GHz) – Order 067-1586-xx.
Power Deskew Fixture – Order 067-1686-xx.
Ethernet Test Fixture – Order through Crescent Heart Software (http://www.c-h-s.com).

Instrument Upgrades
To upgrade your DPO70000 Series Oscilloscope or your DSA70000 Series Serial Analyzer, order option as noted:

XL02™ – To upgrade record length on DPO70000 Series from standard configuration to Opt. 2XL configuration.
XL05 – To upgrade record length from standard configuration to Opt. 5XL configuration.
XL010 – To upgrade record length from standard configuration to Opt. 10XL configuration.
XL020™ – To upgrade record length from standard configuration to Opt. 20XL configuration (only available on instruments of bandwidth >= 12.5 GHz).
XL25™ – To upgrade record length on DPO70000 Series from Opt. 2XL configuration to Opt. 20XL configuration (only available on instruments of bandwidth >= 12.5 GHz).
XL25™ – To upgrade record length on DPO70000 Series from Opt. 2XL configuration to Opt. 20XL configuration (only available on instruments of bandwidth >= 12.5 GHz).
XL510 – To upgrade record length on DPO70000 Series or DSA70000 Series from Opt. 5XL configuration to Opt. 10XL configuration.
XL520™ – To upgrade record length on DPO70000 Series or DSA70000 Series from Opt. 5XL configuration to Opt. 20XL configuration (only available on instruments of bandwidth >= 12.5 GHz).
XL1020™ – To upgrade record length on DPO70000 Series or DSA70000 Series from Opt. 20XL configuration to Opt. 20XL configuration (only available on instruments of bandwidth >= 12.5 GHz).

DV – To upgrade DPO70000 Series or DSA70000 Series with Opt. DVI.
RTE – To upgrade DPO70000 Series with Opt. RTE or TDS9T-Eye software.
SSST™ – To upgrade DPO70000 Series or DSA70000 Series with Opt. SSSST.
ET3 – To upgrade DPO70000 Series or DSA70000 Series with Opt. ET3.
LT – To upgrade DPO70000 Series or DSA70000 Series with Opt. LT.
ASM – To upgrade DPO70000 Series with Opt. ASM.
USB – To upgrade DPO70000 Series or DSA70000 Series with Opt. USB.
PWR – To upgrade DPO70000 Series or DSA70000 Series with Opt. PWR.
PCE™ – To upgrade DPO70000 Series or DSA70000 Series with Opt. PCE.
IPA™ – To upgrade DPO70000 Series or DSA70000 Series with Opt. IPA.
FB™ – To upgrade DPO70000 Series or DSA70000 Series with Opt. FB.
H3 – To upgrade DPO70000 Series or DSA70000 Series with Opt. H3.
MTH™ – To upgrade DPO70000 Series with Opt. MTH.
PTH™ – To upgrade DPO70000 Series with Opt. PTH.
CP2™ – TDSOPM2 ANSITU Telecom pulse compliance testing software (requires Opt. MTH on DPO70000 Series).
USB – To upgrade DPO70000 Series or DSA70000 Series with Opt. USB.
J2 – TDSOC2M2 disk drive analysis software.
VNM™ – TDSVNM CAN and LIN Timing and Protocol Decode (no CAN triggering included).

* Requires Opt. RTE on DPO70000 Series.
** Requires Opt. MTH on DPO70000 Series.
*** Requires ATM CAN/LIN trigger module – order through Crescent Heart Software.
**** For models of bandwidth ≥ 12.5 GHz only.
The Tektronix Customer Service Advantage

Ensure the optimal performance of your Tektronix products and maximize the lifetime value of your Tektronix investment.

This is what you get with the Tektronix Customer Service Advantage:

► Your challenges solved: Access to the engineering expertise that designed and built your products to ensure they are in peak performance. Over 20 man years of training per support engineer.

► Comprehensive and thorough treatment: Software updates, safety and reliability modifications, and cosmetic enhancements are included if applicable. Products are returned to you in a “like new” condition. Worldwide support is available through the Tektronix network.

► Efficiency and convenience: Team of professionals focused on getting your instruments back to you as soon as possible to keep your down time to a minimum and your service management easy.

► Flexible repair and calibration service: Choice of cost effective, flexible options and service packages to meet your needs.

Only Tektronix knows Tektronix instruments the best.

Summary of Basic Service Coverage:

Repair Service Coverage
► Coverage of equipment, parts, labor and transportation
► Applicable product updates
► Applicable safety and reliable updates

Calibration Service Coverage
► Accredited Calibration
► Traceable Calibration
► Functional Verification
► Applicable product updates
► Applicable safety and reliability updates
► Calibration records retention

On-site Service
► Your instruments remain in your workplace
► Turn-around time is measured in hours, not days
► Compliance is assured through calibration or functional verification using factory-certified procedures
► Service is pre-arranged to fit your schedule
► Factory trained experts perform the work at your location

For more information on Tektronix Services:
www.tektronix.com/serviceandsupport
